teamium

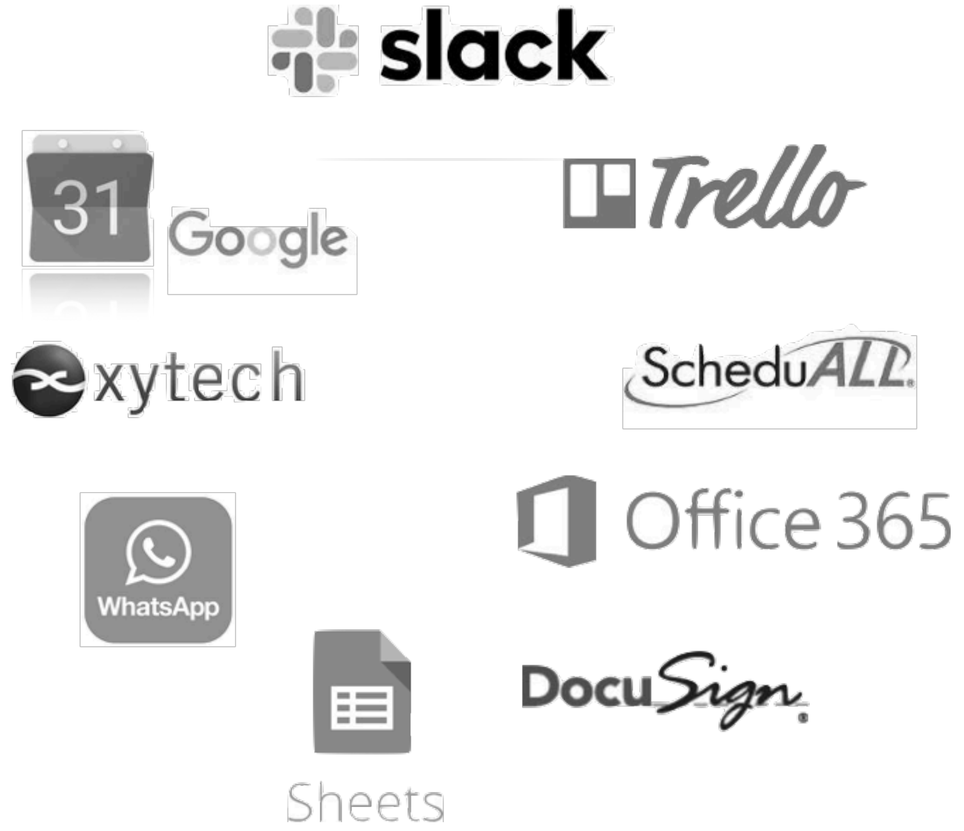
Plan resources. Manage projects. Collaborate with teams.
All in one application.

Today, Production Management

It’s sometimes

When it comes to Production Management and collaboration, the process remains highly fragmented. There is a general lack of standardization and automation. Even within a business unit, teams and individuals may use different process and tools. As the production community lacks good enabling tools, 90% of teams fall back on the default option of using spreadsheets, emails, shared calendars along with other static PC based tools.

The success of modern cloud-based general-purpose project management tools has demonstrated that standardization and automation is possible and eagerly embraced. Customers are ready to buy off- the-shelf products if they are easy and intuitive to use and are customizable to their business rules and environment. Today’s digital savvy users want flexibility and personalization of user interaction to their relevant experience with contextual responsiveness to their intent. The new general-purpose tools excel in their flexibility and scope. The problem is that they provide only the building blocks with which the customer has to create their workflows from scratch. Furthermore, the flexibility comes at the cost of keeping things basic. These tools are not adequate to handle a highly complex, dynamic and interdependent production process with multiple moving parts. When it comes to production, these solutions can automate only 30-40% of workflows.



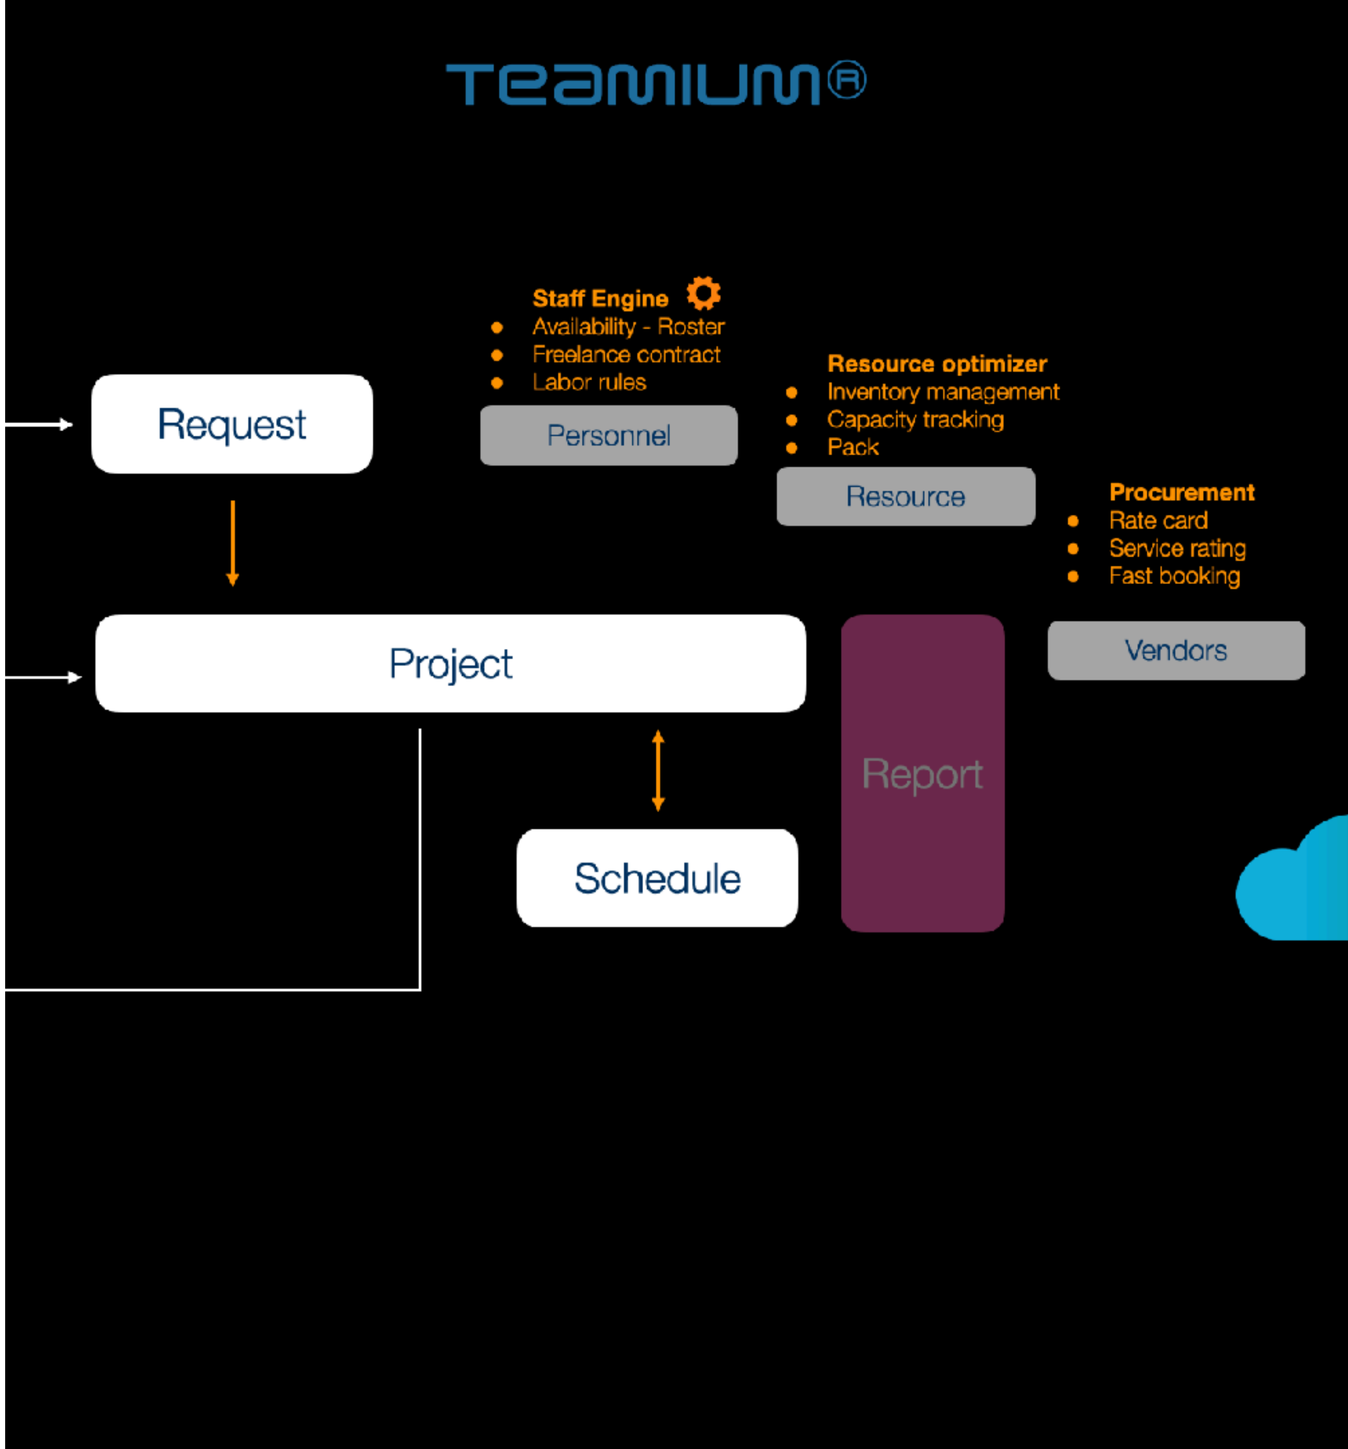
Simplify
One unified cloud application to automate and streamline the entire process

Teamium is an application purpose-built for the production community

Based on Cloud or On-Prem

Teamium has pre-defined workflows that can be customized for all kinds of production and post - from TV Shows, Episodic Series, Broadcast News, and Commercials to Live Sports and Events. It integrates components of Project Management, Resource Scheduling, Task Management, and Dynamic Cost Management specifically developed for production. Teamium can benefit small teams with simple requirements to large teams with custom workflows and integrations. With Teamium's modular design, even a large enterprise can start simple and gradually integrate more advanced features over time.

Teamium is highly customizable at the user level as well, with the ability to save searches, filters, lists and other preferences. You can also save multiple templates and layouts for repeat use. You can hide stuff you do not need, with the knowledge that it is available when you need it.



PLANNING BOOKING SCHEDULER

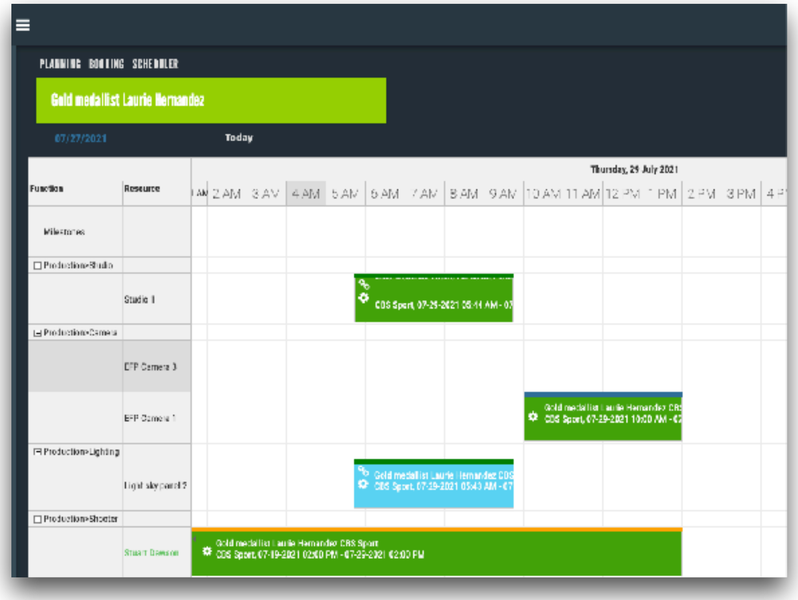
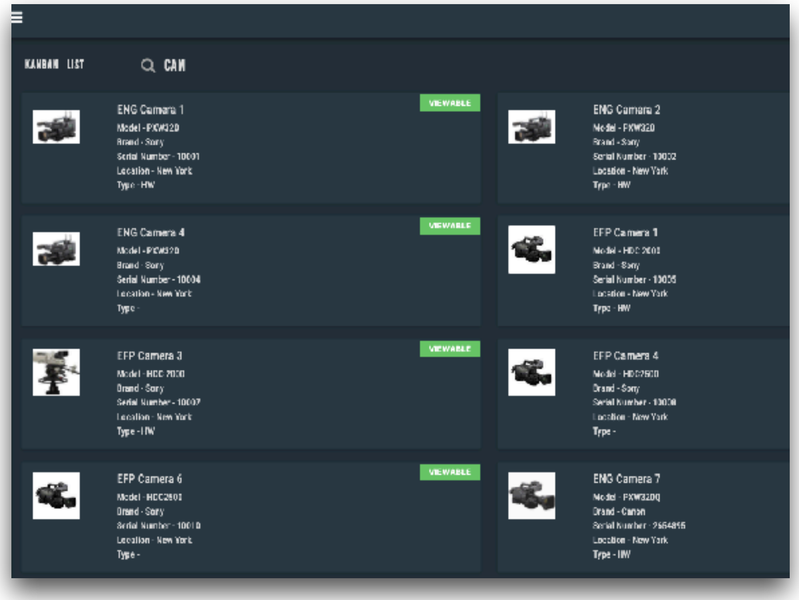
+ ADD NEW PHASE + ADD NEW FUNCTION





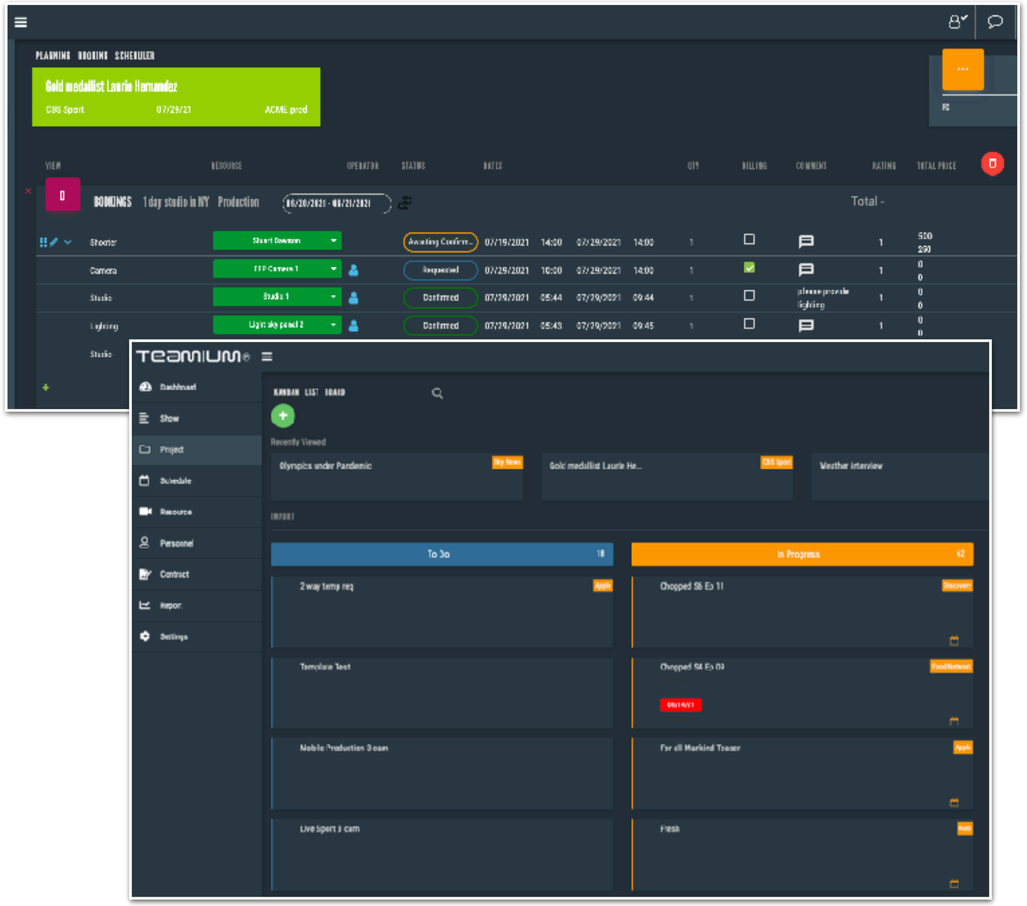
70% Cost Reduction

By consolidating all the tools, data and workflows in one place with a single source of truth, Teamium is able to replace 8-10 applications. The resulting efficiencies remove process bottlenecks and save up to 70% in management costs.

Production folder

From request to actualized budget

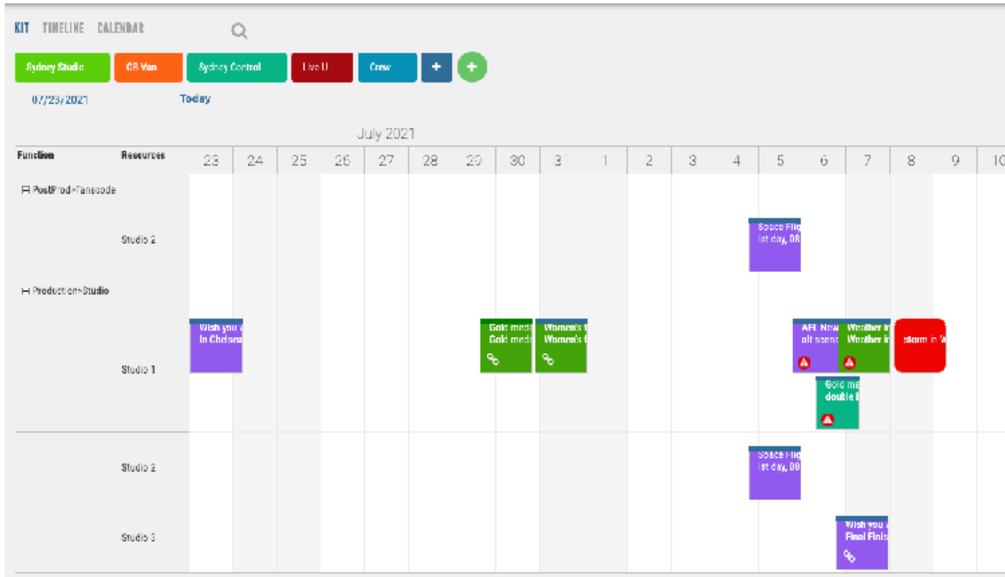
- Teamium allows you to create a production file including a request phase and a planning phase.
- Requests may include a quote portion for customers associated with an approval process.
- The production file consists of several sections (or phases with a personalized display according to the user).
- Custom catalog of functions and roles required for integrated production with pricing cards.
- Dynamic cost tracking.
- Traceability of tasks and actions with notification service.
- Export of predefined and customizable data and reports.
- Phase planning view, project view in Gantt form.
- Use of models, clones, project imports.
- Library of files related to projects, display on a wall.



Resources and projects Planning

fully integrated into production files

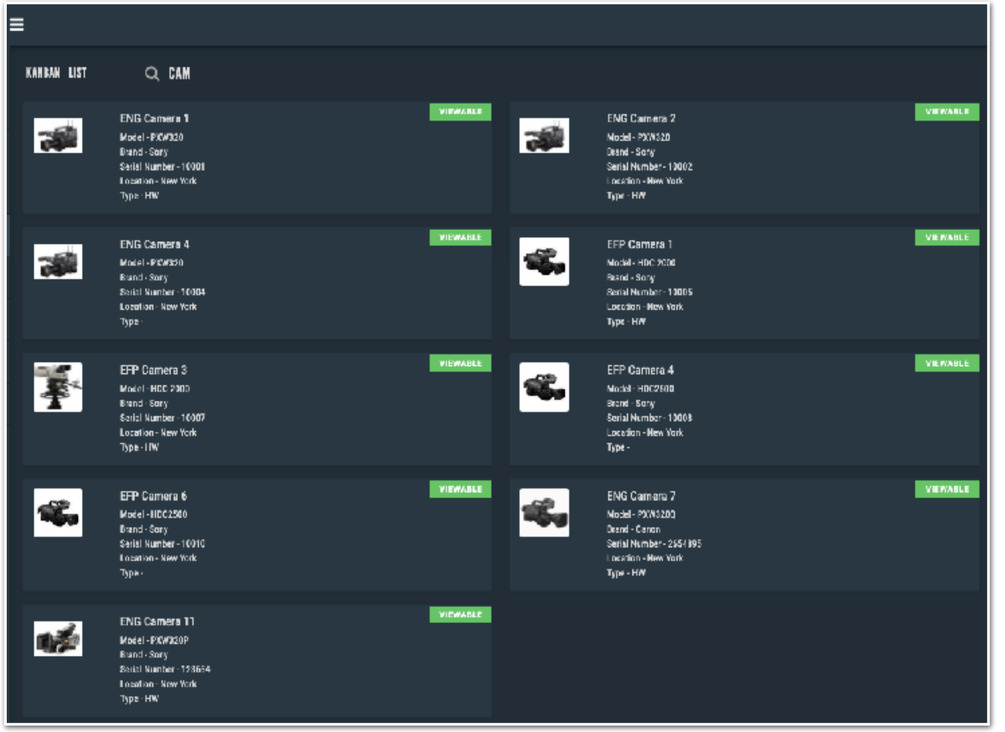
- Display of resources, staff and departments in the form of a timeline and calendar.
- Editing and adding reservations. Creation of dependent elements.
- User can configure their own timeline views.
- Creation of "Placeholder" reservation blocks with approval process.
- Global view of projects with filters (Gantt view).
- Planning view by project phase.
- Creation of pre-booking with request models.
- Display of staff availability with load rate, effort rate.



Production Resource Management

Equipment, accessories, studio, service

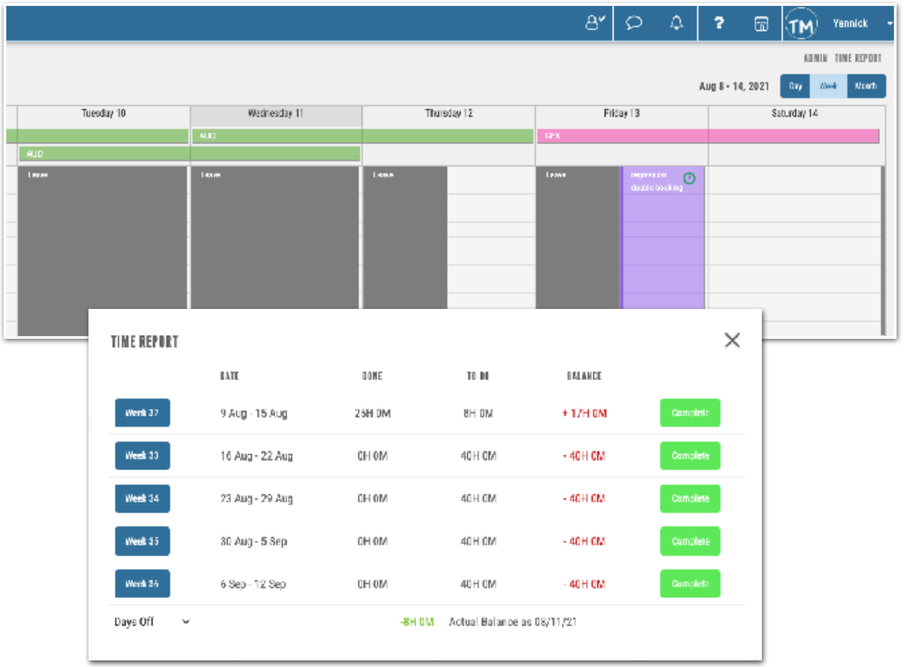
- Information sheet by type of equipment, simply configurable.
- Preventive maintenance monitoring, license expiration date.
- Equipment management by barcode.
- Fleet management by production unit with the possibility of pooling.
- Traceability of reservations and level of use.
- Configuration of packages, with the possibility of offering alternative replacement equipment.
- Association of operators with their preferred equipment.
- Export of predefined data and reports.
- Timeline view of reservations.
- Export of documents, lists, ATA notebooks.



Time reporting

From task management to work cycle planning

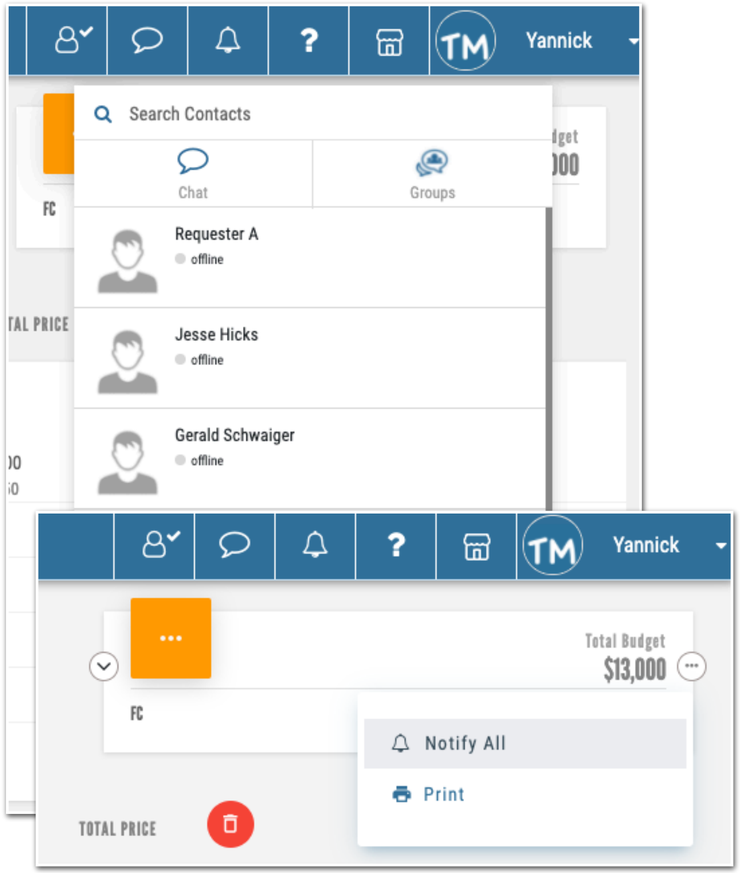
- The user accesses his professional diary with the production tasks and reservations assigned by the responsible planner.
- For each reservation, he can enter his arrival and departure times.
- He can also add events not linked to a production, for example a meeting, a training ...
- Display of the time balance according to the rules of the work agreement.
- Day off request with validation process.
- The manager has a dashboard for monitoring leave and time reports.
- Planning functionality with load allocation for teams. (Roster)



Chat et Notification

Inform, communicate, share, collaborate

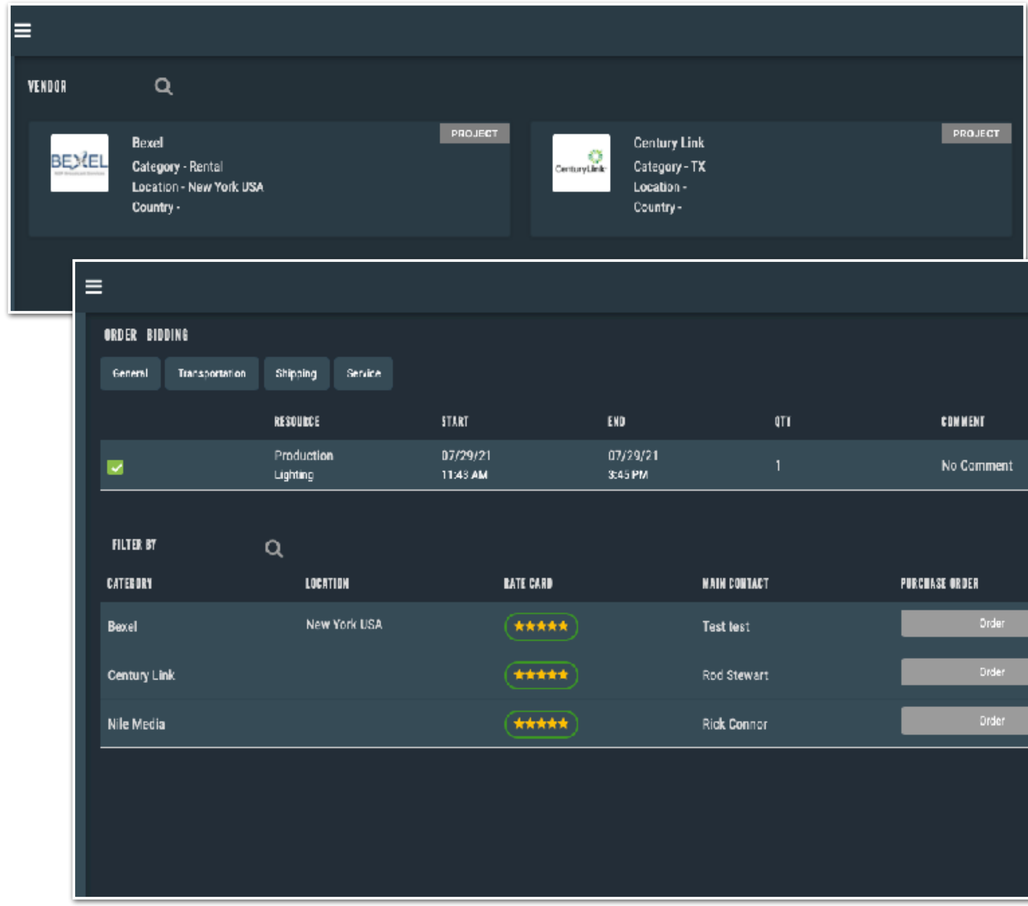
- Notification to users on their tasks and project assignments.
- Selection of the notification mode from Instant Messaging, Teamium micro service, sending email and text message (option).
- Configuration of notifications according to the process steps.
- Teamium's Chat with users.
- Creation of a chat channel for each project to communicate to the entire production team.
- Restful API interface to other solutions on the market.



Services and outsourcing

Supplier catalog, purchase request

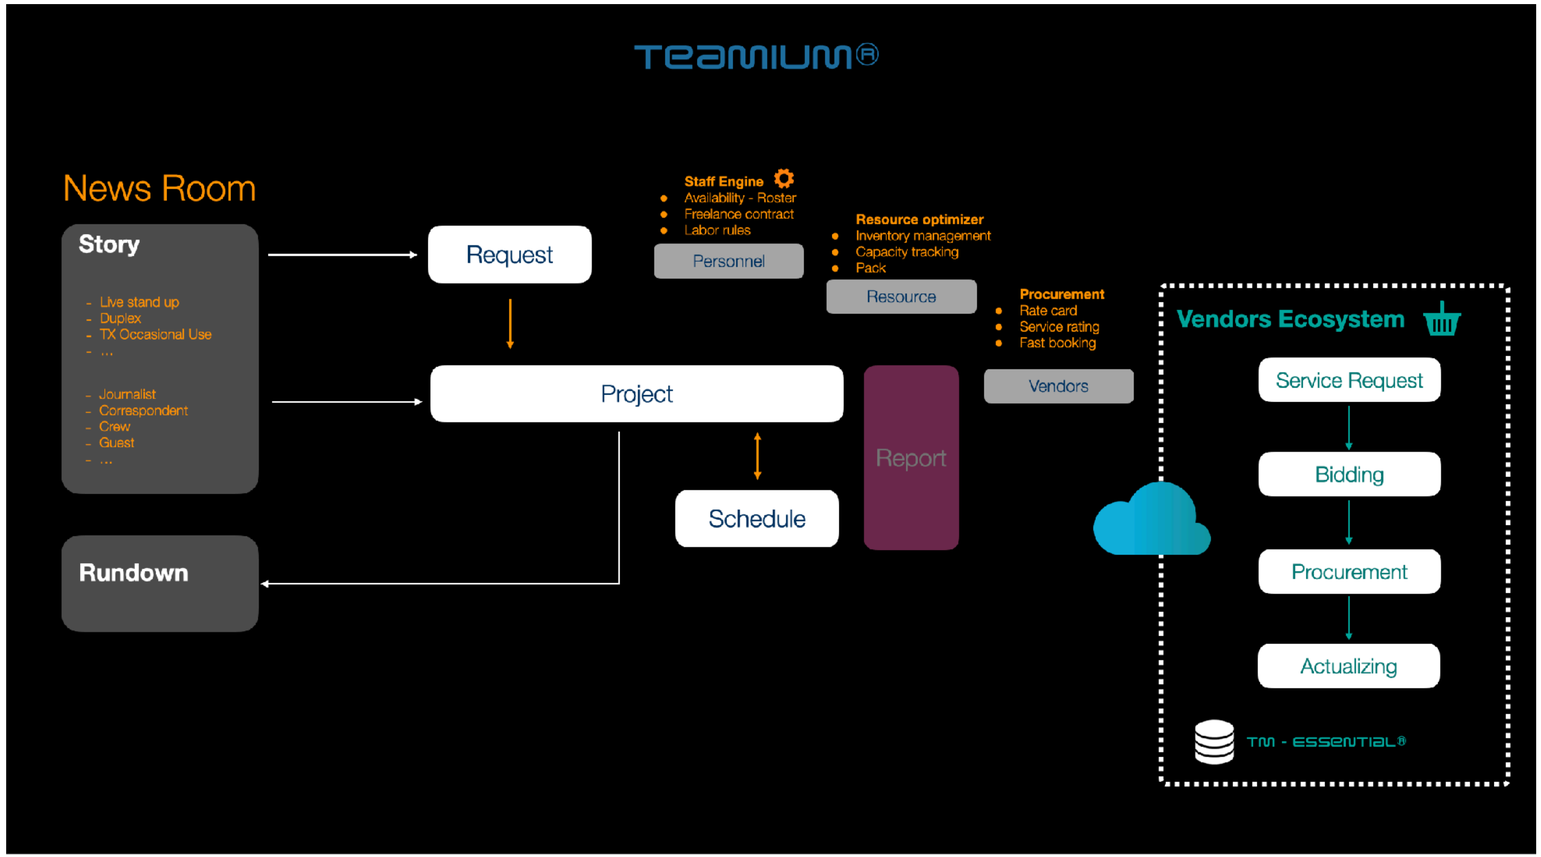
- Supplier database with the type of service provided and the cost map.
- Supplier access account for updating data and prices.
- Identification from the project file of outsourced reservations.
- Creation of a purchase order from a supplier.
- Invitation to several suppliers for submission of price and service offers.
- Integration of purchase orders into the overall production planning.
- Purchase order form by type of service.
- Rating of services performed.



News Workflow

NRCS interface

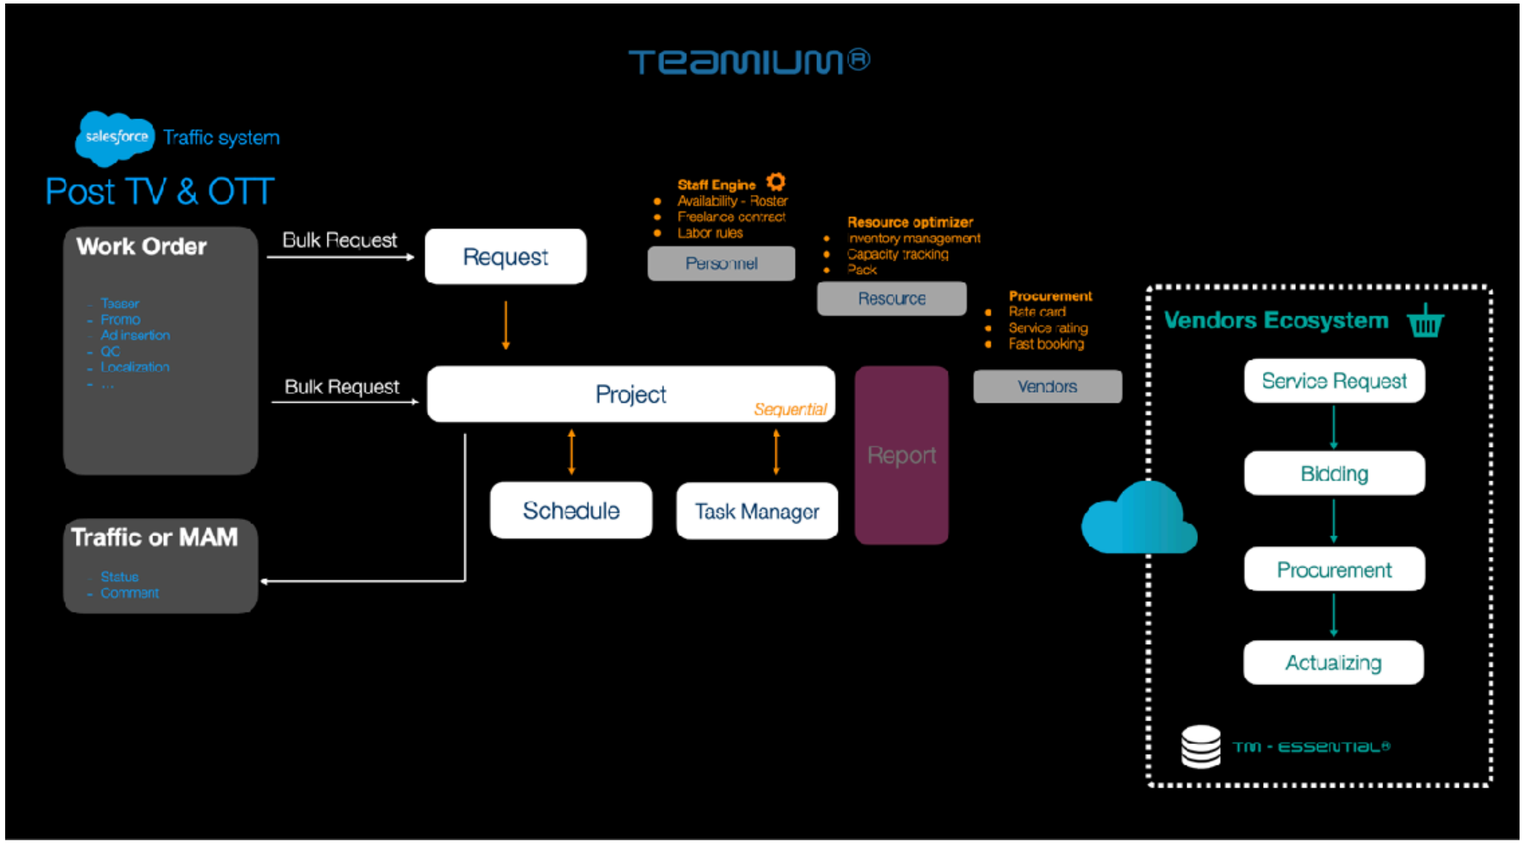
- Resources, Crew, Guest requested from NRCS
- Assigned inTeamium
- Direct ENG bookings within a story bin
- Resource status and rate card



Post TV & OTT Workflow

Request/CRM interface

- Work order raised from CRM
- Teamium to fulfill resources and crew.
- Task management, WO Scheduling.
- Outsourcing



Full control over your data, workspace and user experience

Teamium is a modern cloud-based project management tool requiring no software. You do not need any training and can start using it on day 1 of purchase. You can easily migrate by importing data from your existing systems, eliminating onboarding cost and time.
